

## Heavy Equipment Manufacturer Drastically Reduces Downtime and Labor Costs

### CUSTOMER

Heavy equipment manufacturer

### GRACO EQUIPMENT

ProMix 2KS Proportioning System

### CHALLENGE

A heavy equipment manufacturer was using classic hot potting and air assisted airless spraying to coat rock crushing equipment. Those methods were becoming time consuming and generating too much waste.

### SOLUTION

The manufacturing engineer contacted his local distributor and paint supplier about a solution. They agreed automatic plural component mixing would drastically reduce downtime and labor costs associated with hand mixing. It would also provide ratio assurance and flow control, leading to less overspray and more material savings.

They considered both the Graco ProMix 2KS and the Wagner 2K Smart. Examining the two products side by side, it became evident to the company that the ProMix 2KS could provide more ratio assurance and flexibility with color changes. They also found the 2KS user interface to be user-friendly and in turn easier for their employees to pick up.

### RESULTS

A few months into installation, they are experiencing a drastic reduction in downtime and labor costs. The painters have also found the technology to be very user friendly and intuitive, allowing for a quick transition into production and return on investment.
