

Furniture Company Manages Tough Acid Catalyst Application with ProMix 2KE

CUSTOMER

Wood Furniture Company

GRACO EQUIPMENT

ProMix 2KE Acid Catalyst Plural Mixing System

CHALLENGE

A high-end wood furniture company needed a better way to mix conversion varnish.

Their mixing equipment was expensive to operate, had obsoleted parts, leaked, and wasn't acid resistant. It also had mixing and finishing issues (not drying, sheen difference, etc.).

The customer used about 5 gallons a day and wanted a mix-on-demand system that could handle the harsh varnish.

SOLUTION

Helped by their distributor, they selected a ProMix 2KE Acid Catalyst Plural Component Proportioner because:

- It's designed to manage tough acid catalyst applications used in wood applications.
- The corrosion resistance fluid section, as well as the smart fluid plate with 316 and 17-4 SST catalyst sections, can easily handle strong acid catalysts.

RESULTS

In less than a year, off-ratio rejects dropped to zero, from 2 to 3 percent.

After more than a year, the ProMix Acid Catalyst Proportioner still looks like new, has no leaks, and is ideal for mixing on-demand.
