Pulse™ Hub Network Setup

The HUB is a networked device that is part of the Graco Pulse fluid management system. The device will operate on your LAN and serve up a web page for end-users to interact with Pulse. Since other devices need to be able to reliably find and display this hosted page, the HUB should be given a **non-changing IP address**. If the option exists, adding the device to your local DNS would also make it easier to find the Pulse system web page through a web browser. The forms below provide a reference on how you would like to setup the HUB on your LAN:

TO BE FILLED OUT BY INSTALLER

HUB MAC Address   _____

TO BE FILLED OUT BY END USER

SELECT ONE BELOW

☐ DHCP with reserved IP   ***PREFERRED***

     IP address   _____

☐ Static IP assignment

     Netmask   _____

     IP address   _____

     Gateway   _____

     DNS   _____

HIGHLY RECOMMENDED

If you intend on configuring local DNS to assist with finding the Pulse web page, please also fill out the following:

☐ Local DNS url   _____

Pulse™ Hub Email Setup

Pulse Software utilizes emails for system notifications and automated reporting. To enable this functionality an outgoing SMTP mail server must be setup in the software for sending emails.
